DETAILED ACTION

1. Claims 1-4 are pending.
2. The IDS submitted 13 December 2000 has been received and considered.

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 1-4 are rejected under 35 U.S.C. 103(a) as being unpatentable over Parodi et al "Integrating ObjectBroker and DCE Security" in view of Ossher et al "Combination of Inheritance Hierarchies." Parodi discloses a secure object request broker system.
5. With regards to claims 1 and 3, Parodi teaches a first class including methods of initiating a secured call (Parodi, Page 46, Items 1,2,3 and Page 42 Paragraph 1), a second class including methods of accepting a secure call (Parodi, Page 46, Items 9-10 and Page 42 Paragraph 1), and a third class including methods of bidirectional exchange of messages via a secured call or the secured closure of the call (Parodi, Page 46, column 1 Paragraph 2). Parodi fails to teach the three classes structured in a hierarchy. Ossher teaches classes structured in a hierarchy (Ossher, Figures 1,2,3 and

Page 25 Column 2). At the time the invention was made, it would have been obvious to a person of ordinary skill in the art to utilize Ossher's method of class hierarchy's because it offers the advantage of allowing extensions to code and capabilities to be made with ease and without large amounts of new code (Ossher, Page 25, Introduction, Column 1 and 2).

6. With regards to claims 2 and 4, Parodi as modified teaches the methods conforming to GSS-API specifications (Parodi, Page 42, Column 2, Paragraph 3).
